

# A34697N UV Inkjet Lamps

Our A34697N is a clone replacement for Dr. Honle UV systems. Honle makes excellent UV systems and our A34697N offers direct interchange for Honle product without sacrificing performance. This lamp serves double duty used in both digital UV printing and standard UV curing. We have seen it used in many industries.

Original equipment manufacturer (OEM) and second source TCS Technologies UV lamps serve the same purpose and perform the same function. The ultimate choice is up to the print shop operator to decide which is best for them and their machine. Remember in most cases, buying a lamp from the OEM does not mean you get a better quality part. TCS Technologies provides an equivalent UV bulb made in America at a fraction of the cost.
