

Subzero 055A UV Inkjet Lamps

The Subzero 055A is the workhorse of the inkjet printing industry. This lamp is utilized in numerous inkjet and digital flatbed printers including MacDermid ColorSpan, Gerber, HP, Infiniti, Mimaki, Oce, and EFI Rastek. Its compact footprint coupled with plug and play design makes it a popular choice.

Normally the OEM mounts the Subzero 055A lamp into a quick-change cassette. TCS Technologies has an alternative solution. We sell the lamp alone or we can take your existing cassette, clean, polish, and install a new TCS Technologies UV curing lamp. You will literally save hundreds of dollars off the OEM product without sacrificing UV performance. **At the time of this revision, you could have TCS Technologies rebuild 3-Subzero 055A style cassettes for the price of 1-OEM product.** Most shops opt for us to perform lamp installation.

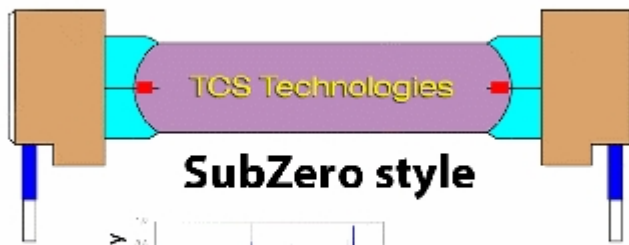

For examples of cleaned Subzero cassettes, see our UV lamp installation section of this website.

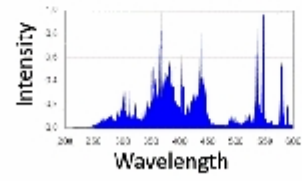

The Subzero 055A is available in various spectral fills. Trust TCS Technologies to match the correct lamp to your printer. Since 1979, we have manufactured quality UV curing lamps right here in the USA. We stand behind our products not excuses. Let us be your profit-partner.
