

UV Curing Lamps For Uviterno Equipment

UViterno curing systems are incorporated into many bottle and cup printers. I must admit we are not big fans of their lamp designs. Many UViterno lamps operate at exceptionally high current levels (high amperage) coupled with very short lamp-seals. This results in blackened lamps with short life. Wall loading (amount of power per unit area) is high placing a great deal of strain on the quartz. Owing to these factors, lamps are expensive, warranties and life are short. On a positive note, ultraviolet output is high due to increased current density and plasma-temperature.

Our UViterno-style lamps include:

080-2587	060-2538	Mono-Jumbo	050-2522
150BTZ/DF 8kva	150BTZ/DF 6kva	MCTZ8015	F126806
022-250G	040-2551	MCTX4025	080-2572
200BTZ/DF	080-2587VL
