

UV Curing Lamps For Argon

Argon (CMP Forni) produces UV dryers for double sided curing, PCB-curing and graphics curing—screen printing.

Lamps for Argon equipment are very fragile. This is due to the large HOK style ceramic used to mount the lamp. Upon receipt of the lamp, the carton should be opened fully so lamp can be lifted out of packaging with no twisting or pulling. **The neck of the lamp is extremely susceptible to breaking.** Be sure to support the lamp neck at all times. Once installed there are no further issues with this product.
